

Providing a seamless experience to your  
sustainable solutions

# Our Product Solutions

- Compliance Checkpoint Software
- DroneSafe
- Smart Cities Solutions
- On and Off-Street Parking Solutions
- Smart Parking
- Pay by Bay or Plate
- Licence Plate Recognition
- Mobile Applications
- Camera Based Guidance
- Infringements Issuance

# Smart Parking

## SmartCloud

Developed in-house, SmartCloud is our sophisticated, powerful and innovative web-based service platform that gathers and processes information.

## SmartSpots

These provide an IoT gateway in a single unit, allowing hundreds of different devices to connect and providing areas of open connectivity called SmartZones.

## SmartSigns

These display real-time information around space availability and car park capacity, as well as providing directions to encourage traffic flow.

## Service Packs

Using our SmartCloudAPI interface, our tailored service pack provides you access to real-time information and events on your site.

## SmartSensors

We offer a range of sensors to suit the needs of different sites. These robust and scalable devices monitor bays and relay live status information to SmartCloud.

## App & Map

Our app, SmartParking, shows motorists clear, real-time guidance and payment and our embeddable map allows visitors to pre-plan their journey.

# The drones have arrived...

Here's how **drone use** can improve your bottom line.

Drones provide information that saves time, legwork and safety issues. Using high resolution cameras they collect more **detailed data** than helicopter flyovers, with **less risk** and **delivered in real time**.

Drone technology **applications and benefits** include

- surveying – drones quickly survey the job site and build highly accurate maps
- access – drones can reach high risk areas, confined locations and remote sites
- accuracy – quality imaging and geographical information system (GIS) mapping provide detailed information
- speed – data is transmitted via a live feed and SD data storage
- monitoring and surveillance – from fleet deployment to ensuring project progress, drones deliver information and enable more efficient management of multiple sites and resources.

# The drones have arrived...

- Drones are a piece of technology that enables us to capture so much more....
- However there are many grey areas around where to fly, do I need a licence, and also the governance and compliance around drones

## Drone management that covers all the bases

The corporate solution for effective control and compliance of drone operations

Dronesafe provides structured and consistent step-by-step pre- and post-flight checklists that improve operational effectiveness, efficiency and safety, while also providing a complete audit trail of all flights.

Dronesafe allows your organisation to follow industry best practice (modelled on ISO standards) in the safe management of all your drone activities. Mobile and browser-based access provides the ultimate flexibility.

Simply connect, stream and comply.

- ✓ Minimise risk and protect your organisation's interests
- ✓ A systematic, enterprise-wide approach to flight management
- ✓ Address regulator and community concerns about **safety, security, privacy and public nuisance**

Providing a seamless experience to your  
sustainable solutions
